## 清洗机

### WASHING MACHINE

深度多功能  
DEEP MULTIFUNCTION

智能 环保 节能

1. 三大清洗功能,彻底解决打印头堵孔,斜喷等问题。
2. 七种清洗转换模式,确保清洗无死角。
3. 分A、B两组,每组可以任意清洗各种打印头。
4. 可清洗多种打印头。赛尔、星光、精工、京瓷、理光、柯尼卡、东芝等。
5. 简洁的操作界面,使技术人员更容易地使用本机器。
6. 选用大流量的齿轮泵,流量更大,压力更稳定。
7. 压力感应装置,实时监测不同打印头在不同清洗转换模式的压力,进行自动调节。
8. 真正的内循环清洗,确保打印头不受外界的二次污染。
9. 机器恒温控制,双重保护装置,避免过高温度造成打印头的损害。
10. 液位感应装置,当液体发生泄漏时,机器将自动作出断电保护。
11. 清洗模具支架任意调节,实现一架多用。

1. Three cleaning functions, completely solve the problems of blockage of the print head, oblique spray and so on.
2. Seven cleaning conversion modes to ensure clean without dead ends.
3. Divided into two groups, A and B, each group can clean various print heads arbitrarily.
4. A variety of print heads can be cleaned. Purcell, Starlight, Seiko, Kyocera, Ricoh, Konica, Toshiba, etc.
5. Concise operation interface makes it easier for technicians to use the machine.
6. Select the gear pump with large flow, the flow is larger and the pressure is more stable.
7. Pressure sensing device, real-time monitoring of the pressure of different print heads in different cleaning conversion modes, and automatic adjustment.
8. The real internal circulation cleaning ensures that the print head is not subject to secondary pollution from the outside world.
9. The machine is thermostatically controlled and has double protection devices to avoid damage to the print head caused by excessive temperature.
10. Liquid level sensing device, when the liquid leaks, the machine will automatically make power-off protection.
11. The cleaning mold bracket can be adjusted arbitrarily to realize a multi-purpose one.

Platform Alignment Machine

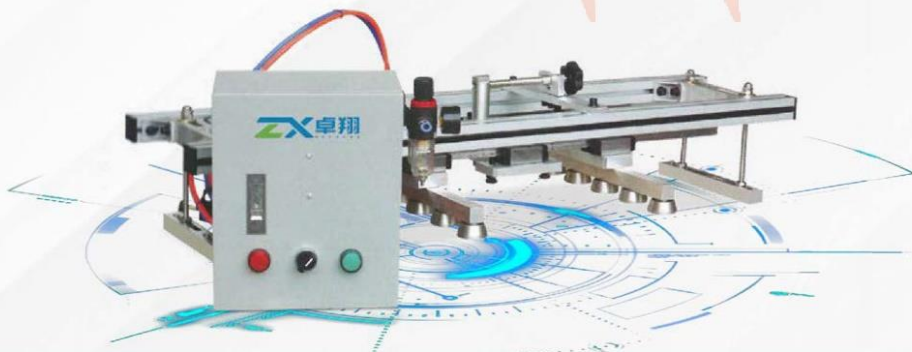

M A H O O R

**OZJ800** 平台式对中机

Platform Alignment Machine

本系列对中机是安装在喷墨机进砖位置的自动对中产品，该设备自带有一个平皮带平台变频调速，可以有效地隔离对中过程中和砖坯自带的粉尘，该设备具有结构轻巧、动作流畅、控制简单等特点，其适用于瓷片、地砖、仿古等瓷砖产品，采用单气缸双连杆两边同时动作夹紧结构，保证其定位同步和精准，采用直线导轨轴承加滑块组合而成使其更耐用和轻巧，采用不锈钢耐磨导轮。

This series of centering machine is an automatic centering product installed at the brick feeding position of the inkjet machine. The equipment has a flat belt platform with frequency conversion speed regulation, which can effectively isolate the dust in the centering process and the brick itself. It has the characteristics of light structure, smooth movement and simple control. It is suitable for ceramic tile products such as tiles, floor tiles, and antiques. It adopts a single-cylinder double-link clamp structure with simultaneous action on both sides to ensure its positioning synchronization and accuracy. Linear guide bearings are used. The slider is combined to make it more durable and lightweight, and stainless steel wear-resistant guide wheels are used.
