

How to use

Youtube

for LinkedIn

01

Go to Youtube

Type your niche like 'AI podcast'

The screenshot shows the YouTube mobile app interface. At the top, the search bar contains the text 'ai podcast'. A red arrow points to the microphone icon next to the search bar. Below the search bar, there are tabs for 'All', 'Shorts', 'Videos', 'Unwatched', and 'Watched'. The 'All' tab is selected. The search results show two videos. The first video is titled 'Godfather of AI: I Tried to Warn Them, But We've Already Lost...' by 'The Diary Of A CEO'. The second video is titled 'Why AI is Overrated - with Neil deGrasse Tyson' by 'Hasan Minhaj'. Both videos have a '4K' quality indicator. The interface also shows a sidebar on the left with icons for Home, Shorts, Subscriptions, and You.

In a recent interview, Cleo Abram sat down with Sam Altman, CEO of OpenAI, to discuss the trajectory of AI and its potential to make groundbreaking contributions to science. When asked, "When will GPT-5 make a discovery?", Altman reframed the question to focus not just on GPT-5 itself, but on the broader evolution of AI beyond this next model. Altman predicted that most experts would agree that such a milestone will occur within the next two years. However, he stressed that the term "significant scientific discovery" needs careful definition; what counts as significant will shape public perception of when the event truly happens. "I would bet that by late 2027, most people will agree that there has been a significant new AI-driven discovery. And the thing that I think is missing is just the kind of cognitive power of these models." Altman's remarks suggest that while current large language models like GPT-4 and GPT-4o have impressive reasoning and knowledge capabilities, they still lack the deeper cognitive architecture necessary to independently generate novel, high-impact scientific insights. The leap to this stage, according to him, will require substantial increases in model intelligence, reasoning capacity, and possibly new training paradigms, beyond mere scaling of today's methods.

Sam Altman just made a bold prediction.

AI is about to change science forever.

OpenAI's CEO says an LLM will make a major scientific discovery by late 2027.

Here's what you need to know about this coming leap:

- The next generation of AI will have much more cognitive power.
- These models will not just process data: they will reason & connect dots.
- AI will move from summarizing research to making real discoveries.
- Altman believes the missing piece is raw cognitive strength.

AI will find something new that humans have missed.

This could be a new drug, a new law of physics, or a breakthrough in energy.

By late 2027, most experts will agree that AI has made a real, original contribution to science.

Here's why this matters:

|

- AI will speed up research in every field.
- Scientists will work with AI as partners, not just tools.
- The pace of discovery will jump.

But the key is cognitive power.

Today's models are smart, but not yet creative enough.

Ruben Hassid
