

# Ronak Stone

The image features a dark grey, almost black, background with a prominent marble pattern. The pattern consists of intricate, light grey veins that meander across the surface, creating a complex and organic texture. Centered in the middle of the image is the text "Ronak Stone" in a bold, serif font. The letters are a bright, metallic gold color, which stands out sharply against the dark, veined background. The overall composition is simple yet elegant, emphasizing the natural beauty of the stone and the classic typography.

## STONE, the art of nature in your home

Natural stones have many uses and their use can give a different texture to the space. These stones are found in abundance in nature and their use causes less damage to the environment; Because they are free of toxic substances, they are stable and they can always be reused. Each stone has its own character and is used in different environments. Black marble is one of the most beautiful and natural stones that architects and designers like to use in construction.

Ronak Mining and Processing Group, which consists of road construction, mining, tunneling, blasting and blasting companies (Patek Pi Optimizing Company, Farjam Damavand Mineral Production Company, Marmarin Seng Ronak Company), which has been engaged in mining since 1370 He is working in mines, national road construction projects, tunnel digging, and the owner of the concession of Damavand white stone mine and Khorasan black stone mine, producing alabaster stone. Limestone and marble.

### Damavand White Mountain Mine

This mine, with an area of 6 square kilometers, located 50 kilometers from Tehran, has 2 types of minerals: alabaster (in 8 color themes) and limestone.

### Khorasan Black Mountain Mine

The Khorasan Black Mountain Mine is an area of 3 square kilometers located in North Khorasan Province, Shirvan County, which has black marble.

### Ronak Mining and Processing Group, the owner of the concession:

- Damavand White Mountain Mine
- Khorasan Black Mountain Mine

### Projects:

- Road construction and tunnel excavation operations on the Alamut-Qazvin-Tonkabon axis
- Chitgar Artificial Lake excavation and preparation project
- Haraz Road construction operations and 1038-meter-long waterfall tunnel excavation
- Zangabad Gold Mine, Qorveh, Kurdistan
- Mazandaran Cement Factory Limestone Mining
- Sungun Copper Tailings Mine and Dam Extraction, Drilling and Blasting

# Black Panther Marble

Black Panther Marble is a stone with a black background and in some cases brownish with irregular white and golden lines. This stone is produced in slab, tile and longitudinal dimensions. The most important applications of this stone include its use in paving interior spaces, facades and interior walls, elevator stones, as well as bathrooms in residential units and commercial and office centers, especially luxury centers such as hotels and halls.

Black Panther Marble is produced in raw and processed form by Ronak Stone Mines and Factories Complex, which is the result of mining the Black Stone Mine of Khorasan Mountain. This mine belongs to Ronak Stone Mines and Factories Complex.

## Features of Black Panther Marble:

Excellent sandability

Density 9.2 grams

Zero water absorption

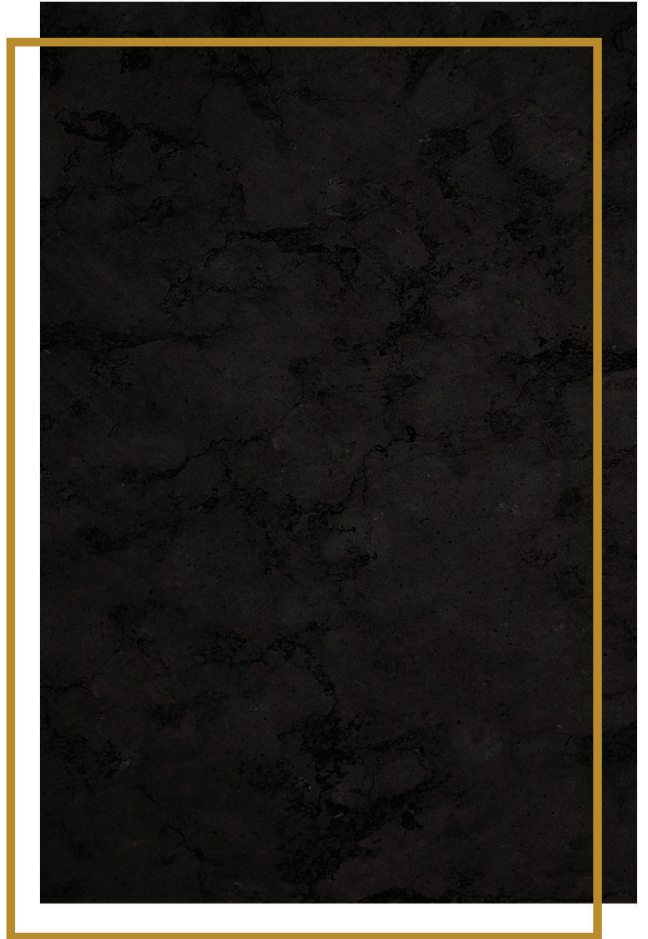

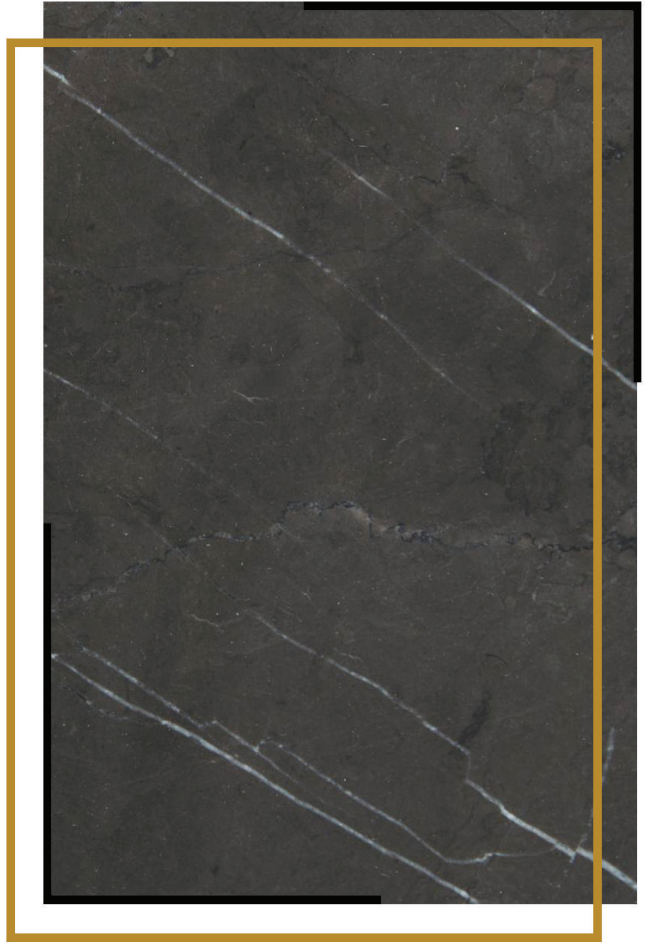

No color change on the exterior

High hardness on floor surfaces and no abrasion

# Alabaster

Alabaster is a type of fine-grained gypsum. This stone, like marble, transmits light remarkably.

This stone is a type of fine-grained gypsum that is dense and oily. The color of this stone is white. The property of transmitting light is one of the main characteristics of this stone.

## Damavand White Mountain Stone Mine

Damavand White Mountain Stone Mine belongs to the Ronak Stone Mines and Factories Complex. The extraction of this mine has been in the possession of the complex since 1995 and includes alabaster, limestone and gypsum minerals.

Damavand White Mountain Stone Mine is one of the best known mines of this stone in the world in terms of its alabaster reserves (8 color themes).

One of the most important characteristics of the stone is that any light that shines on it reflects the same light.

## Characteristics of Alabaster Stone

The ability to transmit light is one of the best advantages of this stone.

Bright and attractive color background

Making luxury stone sculptures and artifacts

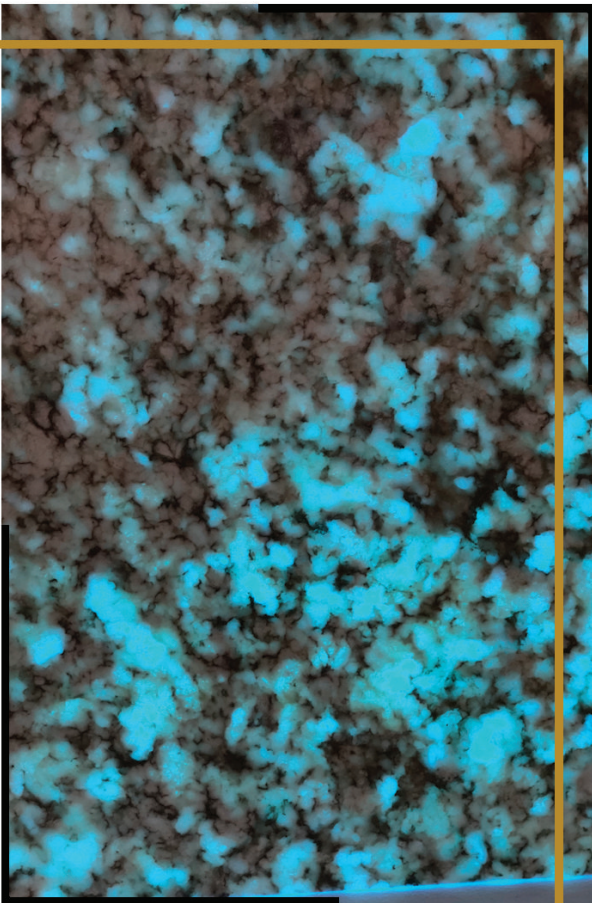

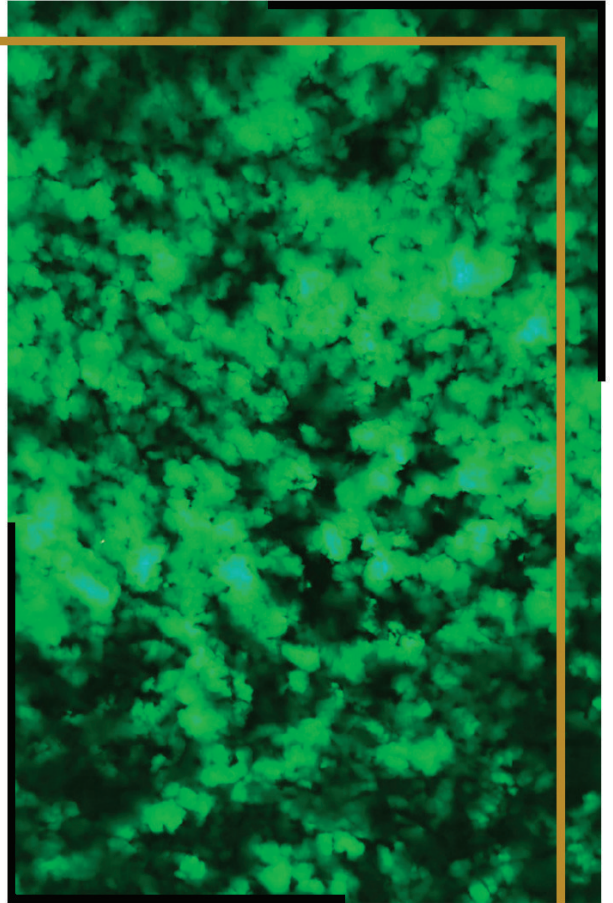

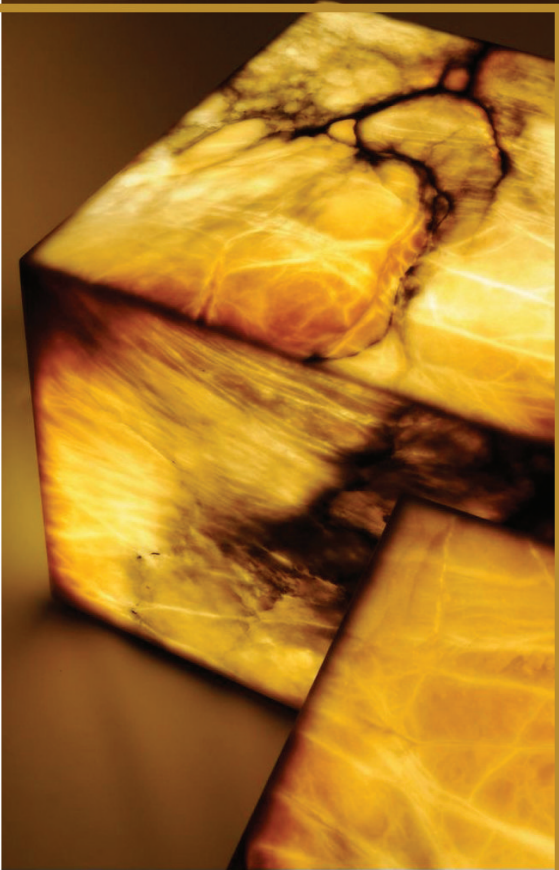

Ability to cut up to 7 mm thick without chemical processing

Very low water absorption

# Limestone

Limestone is a type of carbonate rock, composed of carbonate minerals and matrices. The main mineral constituting this rock is calcite (calcite is a lime mineral). Other minerals include aragonite, dolomite, quartz, feldspar, hematite, and limonite. But the notable thing about limestone is the presence of pieces of animal skeletons in some of them, which makes this rock somewhat special.

## Uses of Limestone

Limestone cannot be used everywhere due to its high water absorption and low erosion resistance. This rock should be used in parts of the building that have less water.

It can be used in buildings such as interior walls, exterior facades, staircases, and steps.

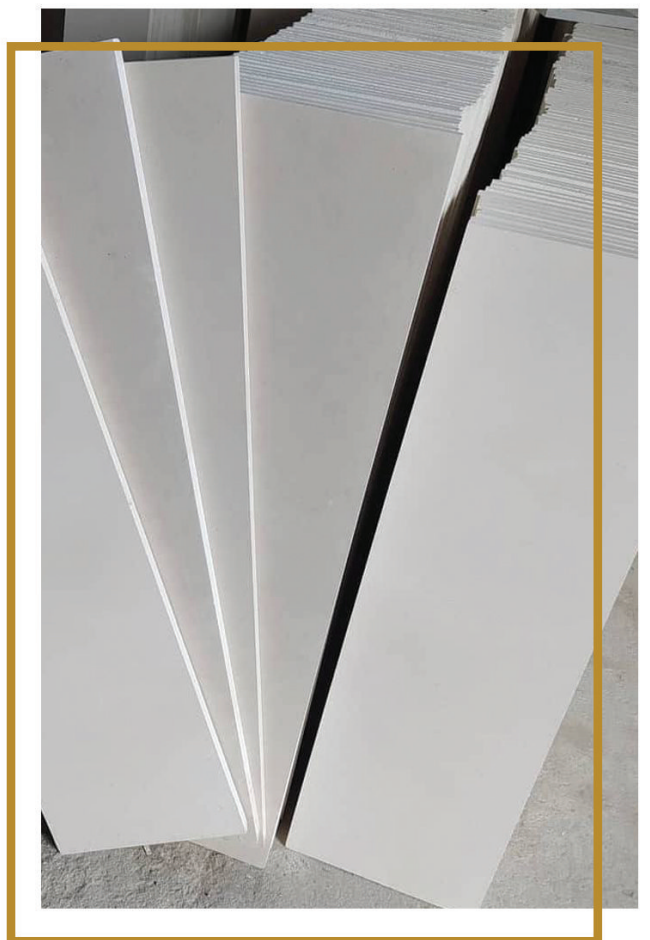

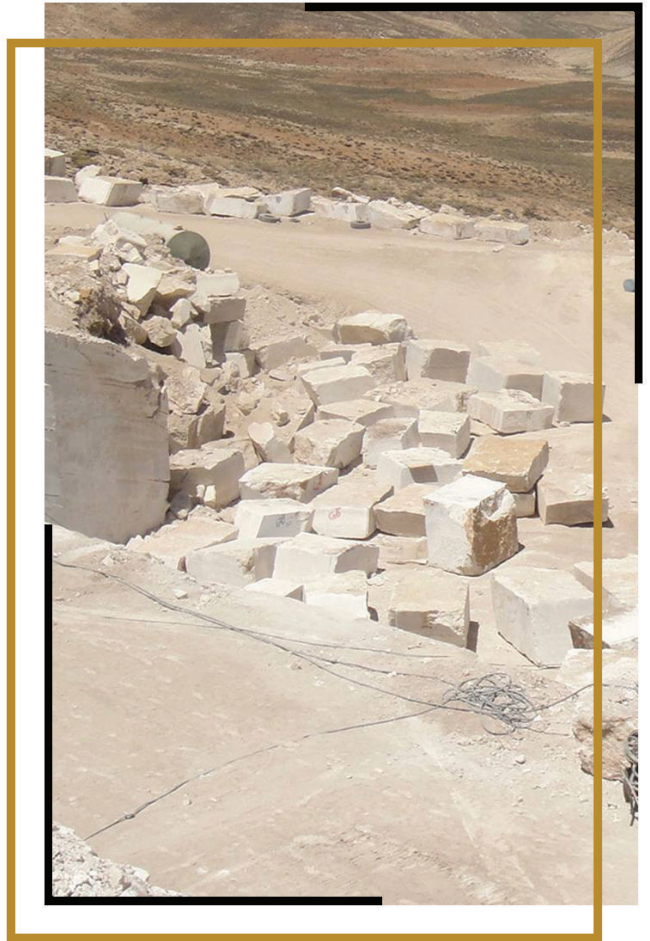

Ronak Stone Quarries and Factories Limestone is the result of mining the Damavand White Mountain Stone Mine.

Limestone is favored by domestic and foreign designers and architects because it is uniform and free of sedimentary veins.

# Azna marble

Azna porcelain stone, also known as Arbab porcelain, is known as the highest quality and most expensive white porcelain stone due to its smooth surface, the least amount of veins and curls among porcelain stones. Stone or crystal has long been an adornment of our homes. Due to the lack of advanced mining and cutting technologies in the past, these stones were also offered in small sizes like other stones. But now the slab and longitudinal sizes of this product have shown another view of the beauties and capacities of porcelain stones.

## Applications of Azna porcelain stone

Interior space of commercial - residential complexes and hotels as wall - floor - staircase and corridor coverings, etc.

Use as a building facade stone

Using it as a cabinet top

Due to its diagonal and longitudinal veins, it is a good option for execution as bookmatch and formmatch slabs.

Production of stone artifacts such as washbasins - fountains - statues - vases - tasting tables - dining table tops and coffee table tops

Making threshold stones or stone mats

# Aligoudarz marble

Aligudarz Crystal Marble is a white-colored stone with light and dark gray veins and lines.

Aligudarz stone is considered one of the top porcelain stones in Iran and the world due to its glossy finish and crystalline material. This stone is often processed and supplied in the form of tiles and slabs in bookmatch and formmatch designs.

The quality, unique beauty, and very reasonable price of Aligudarz porcelain stone types compared to foreign competitors have caused this stone to be used in many residential, office, commercial, and luxury projects.

## Uses

Interior space of the building

Paving stone for the hall, reception, and rooms

Interior walls of the building

Borders and sides

Hotels, stores, and luxury commercial centers

Stone for stairs and under stairs

Staircases and stair treads and walls

Building entrance lobby

Borders and elevator frames

Cabinets and kitchen spaces

Luxury and master bathrooms

Luxury toilets

Counters and countertops in public and shopping centers

# Black Aligoudarz marble

Aligudarz black porcelain stone is one of the most luxurious and beautiful crystal or porcelain stones available in Iran. The color background of this stone is black and is accompanied by small and large white waves and veins, which give the stone a unique pattern and design. In addition to its beautiful appearance, Aligudarz black porcelain is also of high quality and high quality, which has attracted the attention of architects, designers and builders and has a high demand. Aligudarz black porcelain has an extraordinary level of sandability and also has very little water absorption, which can be attributed to the dense texture of this stone. Aligudarz black porcelain has many uses in construction, the most important of which is paving and wall covering of luxury buildings such as hotels, exhibitions and restaurants. When this stone is prepared and installed in the form of bookmatch and formmatch slabs, the beauty of the stone is multiplied due to the beautiful designs and patterns on the surface and the symmetry of the waves and slab designs. The processing of Aligudarz black crystal stone is usually done by grinding and cutting into various dimensions such as 40 lengths and slabs.

## Applications of Aligudarz black porcelain

Interior and exterior facade stone

Decorative stone

Interior paving stone

Body stone

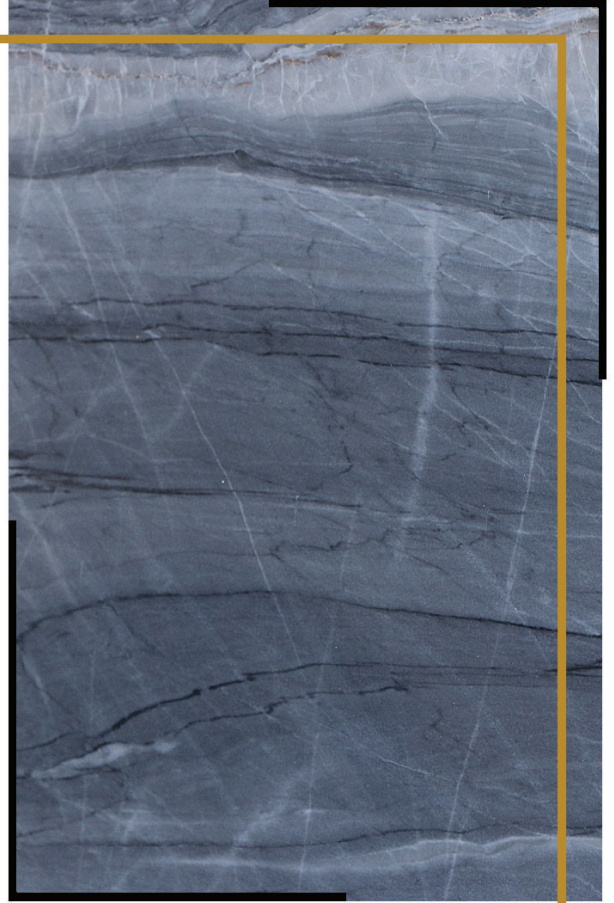

Interior and exterior wall stone

Master bathroom paving stone, luxury sanitary ware and kitchen, etc.
